Dear Recruiter & Hiring Manager,

I am writing to express my interest in full-time Software Engineering roles starting May 2024.

I am currently in my final semester of Master of Science in Computer Science program at The University of Arizona, Tucson. Previously, I interned at Resilient Software Security as a Software Developer, where I worked on creating and deploying a software's security report generation algorithm on AWS using docker. This automation reduced the manual work of report generation from a week to few minutes. I also have three years of experience as a Software Developer at Tata Consultancy Services, where I worked on projects involving Maven, Java, SQL, Oracle PL/SQL, Teradata database, Informatica and agile.

I am skilled in Software Development using C++/C, Python, Java, R, Swift (Learning). I have also worked on Web Development, Databases, Cloud Services, and have academic experience in AI/ML. I am passionate about learning new technologies and applying them to real-world problems. My experience working in a start-up culture made me an adaptable and self-starting engineer and honed my problem-solving skills.

It would be a great opportunity for me to stand a chance working for the organization, which encourages a diversity of thoughts, creative solutions, and most importantly a never-ending scope of learning new things. Kindly review my profile for the full-time Software Engineering roles. Thank you for your time and consideration. I look forward to the possibility of an interview to further discuss my fit for the role.
